DEPTH FIRST SEARCH – WATER JUG PROBLEM

In the **water jug problem in Artificial Intelligence**, we are provided with two jugs: one having the capacity to hold 3 gallons of water and the other has the capacity to hold 4 gallons of water. There is no other measuring equipment available and the jugs also do not have any kind of marking on them. So, the agent's task here is to fill the 4-gallon jug with 2 gallons of water by using only these two jugs and no other material. Initially, both our jugs are empty.

AIM :

To implement a python program for Water Jug problem using depth first search problem

SOURCE CODE :

```
from collections import deque
```

```
def DFS(a, b, target):
```

```

m = {}
isSolvable = False
path = []
q = deque()

q.append((0, 0))

while (len(q) > 0):
    u = q.popleft()
    if ((u[0], u[1]) in m):
        continue

    if ((u[0] > a or u[1] > b or
        u[0] < 0 or u[1] < 0)):
        continue

    path.append([u[0], u[1]])

    m[(u[0], u[1])] = 1

    if (u[0] == target or u[1] == target):
        isSolvable = True

        if (u[0] == target):
            if (u[1] != 0):
                path.append([u[0], 0])
            else:
                if (u[0] != 0):
                    path.append([0, u[1]])
                sz = len(path)
                for i in range(sz):
                    print("(", path[i][0], ", ", path[i][1], ")")
                break
        q.append([u[0], b])
        q.append([a, u[1]])
    for ap in range(max(a, b) + 1):
        c = u[0] + ap
        d = u[1] - ap

        if (c == a or (d == 0 and d >= 0)):
            q.append([c, d])

```

```

c = u[0] - ap
d = u[1] + ap

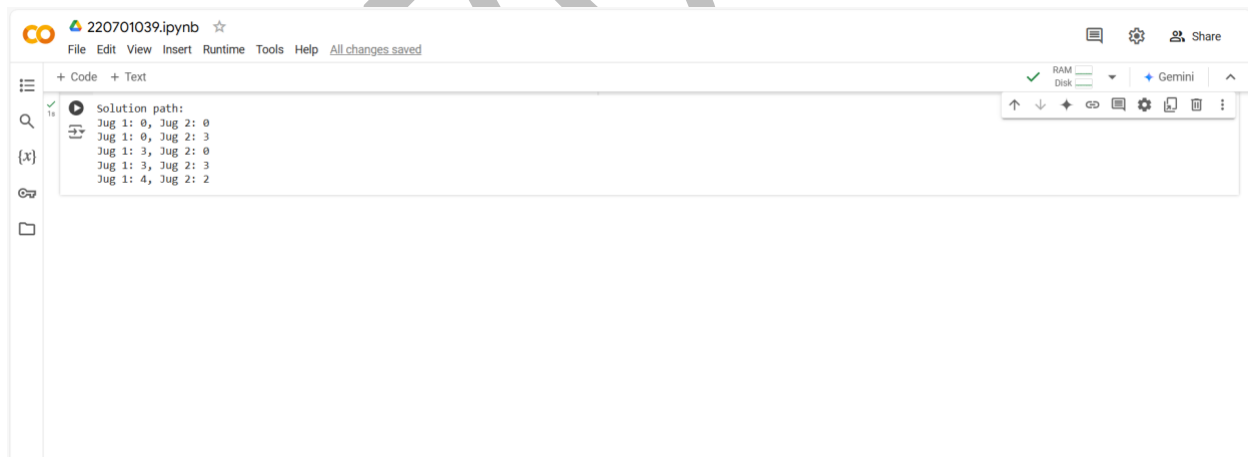

if ((c == 0 and c >= 0) or d == b):
    q.append([c, d])

q.append([a, 0])
q.append([0, b])
if (not isSolvable):
    print ("No solution")

Jug1, Jug2, target = 4, 3, 2
print("Path from initial state ""to solution state ::")
DFS(Jug1, Jug2, target)

```

OUTPUT :

The screenshot shows a Jupyter Notebook window titled "220701039.ipynb". The code cell contains the DFS algorithm. The output cell shows the solution path:

```

Solution path:
Jug 1: 0, Jug 2: 0
Jug 1: 0, Jug 2: 3
Jug 1: 3, Jug 2: 0
Jug 1: 3, Jug 2: 3
Jug 1: 4, Jug 2: 2

```

RESULT :
